Besonderheiten:

Ausrüstung:

Charakteristik: (Ersatzübersetzung)

Dry, torrential ravine.

Review updated in October 2022:

In both the parking lot below and above there is some Vodafone coverage, whatsapps.... come out with patience.

At the 55m rappel there is coverage.

Hydrologie:

Anfahrt: (Ersatzübersetzung)

Access to the ravine

From Argelita take the CV-194 towards Ludiente. About 800 meters after km 13, after a sharp bend to the left we will leave a car. With the other car we will return in the direction of Argelita, after km 11 we will see on our left a bridge that crosses the river Villahermosa, we take it and we will take the CV-193 road in the direction of Lucena. We follow this road for about 9 km approximately, we will see on our right some farmhouses near the Font del Perxano and about 200 meters later we will see a track on our left that will take us to the parking of the second car (about 550 m from the beginning of the track).

Zustieg: (Ersatzübersetzung)

With only one car

From the parking, we go down to the Villahermosa river and go up the Dama ravine until we reach the last rappel of the ravine, just before reaching this rappel, on our left (orographic right) we will see a steep path, we take it and following the milestones, we will arrive right at the beginning of the Dama ravine (we arrive right at the first ledge (r4m).

The approach is steep, but it is only walking, you only have to climb at two points and there are two fixed ropes.

With two cars

The top car is left in the same parking lot as the Barranco del Mas de Chicharro and we take the same approach path. When we separate from the path of Chicharro there is a piece with a lot of vegetation, we will reach a ridge by which we will approach the ravine.

Tour: (Ersatzübersetzung)

Dry canyon with a spectacular 55m rappel. In this meeting there are several additional chemicals in case someone with more experience stays to help the companions. It may be necessary to pedal to get out of this meeting. A few meters after the belay the rappel is blown out.

Rückweg: (Ersatzübersetzung)

The return is the same with one car than with two cars.

The ravine flows into the river Villahermosa, in summer the river Villahermosa is usually dry at the mouth of the ravine but in spring and autumn it usually carries water, we must be careful because if there has been torrential rains in the previous days it can be difficult to cross it, there are times that we can cross it without getting wet (jumping over the stones) or barefoot.
