Ropes: 2x 30m

Summary: (machine translated)
Raw data import from Descente Canyons https://www.descente-canyon.com/canyoning/canyon/22080

Hydrology: (machine translated)
Difficult evasion options. Easy exposure to high water.
Can also be used after extreme rainfall.

Carried out at high water, beginners should not be taken along. All waterfalls can be easily bypassed (with a rope). The first waterfall is the only one that could be problematic when descending in the axis (large basin with water backflow). The C30, which looks like a chute from above, goes by (possibility to use the RD trees to bypass it). A jump at the foot of the C30 from 5 m would be conceivable (after probing).

Access: (machine translated)
In Medeglia, turn left towards Canedo onto a road whose bends you must negotiate well. Continue straight on until you cross a bridge, which is the starting point for the descent.
Park your car a few dozen meters further on.

Approach: (machine translated)
Entry Holzi at 920HM

Depart from the bridge (moor at the bridge).

Tour: (machine translated)
A series of medium-high waterfalls on the first part of the trail, followed by a section consisting mainly of walking through garbage.
The exit can be made to the left once the guardrail of the road is visible, but it is easier to take the exit to the right shortly after.

Canyon spoiled by the ugly final step. Not very playful to master. Equipment on Expansion Mono Point.

Return: (machine translated)
Follow the road to the car.

Better grip than expected. Very nice stream for beginners or after rain. At the very end, a few meters before the exit, sewage is introduced. Anchors all in good condition. (machine translated)
