Specialities:

Gear:

Summary: (machine translated)
Beautiful ravine of ferruginous waters with a magnificent waterfall of 55m. Hard access but very short return.

Hydrology: (machine translated)
Difficult and committed

Access: (machine translated)
Take the N260 to Castejón de Sos, where we turn off to Benasque on the A139.
We cross Benasque and continue along the road. After passing the Cerler traffic circle we reach the bridge over the Ésera, here on the right is a track to Camping Ixeia, we take it and park across the Rinero ravine.

Approach: (machine translated)
We leave by the track that goes along the orographic right of the ravine, after a few hundred meters crosses it and through the forest is gaining altitude. At an altitude of about 1350m we will take a detour to the left following a yellow markings. This path will be gaining height more steeply to 1550m where we will see a milestone and we turn left by white markings to the rocky area that leads down to the river.

Tour: (machine translated)
A few small abseilings will lead us to the impressive 55m waterfall. We will reach it with a handrail to the head, from here a first abseil to the ledge and then a second run to the base.
From here the most interesting of the ravine are its ferruginous waters, the pyrite incrustations and the shapes and colors of the rocks with the oxidation of the mineral water.
Several projections that can be climbed and/or rappelled until reaching the way up.

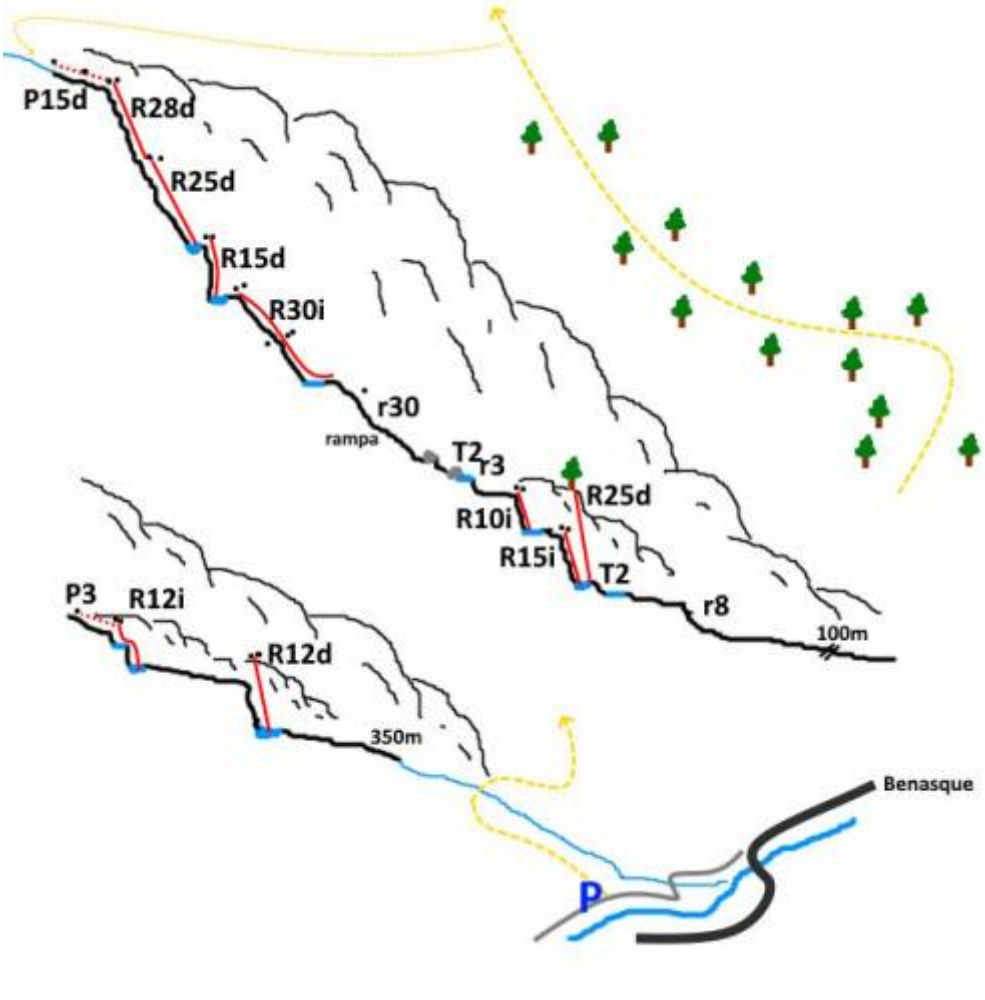

Return: (machine translated)
We retrace our steps on the way up
