Rating: ☆ 4.8 (2)	**Info:** ★ 0 ()	**Belay:** ★ 0 ()

Specialities:

Gear:

Summary: (machine translated)
rappel canyon in granite; possible jumps

Hydrology:

Access: (machine translated)
Coming from Ivrea or Turin we approach the valley of Torrente Orco. On the SP460 past Cuorgne and Pont Canavese we drive up the Orco valley to Noasca (about 25 km from Pont Canavese - see also map in photo gallery). In the center of the village we find a parking place for our car.

Approach: (machine translated)
We take the trail that starts at the church (1055m altitude) and also leads to the final waterfall of Noaschetta. However, before reaching the waterfall we turn right and climb on ribbons through the rock walls up to Alpe Sengie (1300m altitude). We take the path that passes below the houses and heads towards the stream. At the footbridge that crosses the stream in the course of the path we enter - see also wikiloc.

Tour: (machine translated)
9 rappels; after 4 rappels, before the difficulties begin with strong water flow, possible exit to the right (see topographic view). The descent is now in a chute. The exit from the pool after the 25m rappel is not without problems. The 60m - final rappel is broken on the topographic view (15/50). From the pool under this waterfall we come out to the left on the path that leads from the village to the waterfall.\n

Return: (machine translated)
On this path down to Noasca.

Coordinates:
Canyon Start 45.4577 7.3135
Canyon End 45.4556 7.3127

Automatisch importiert von Descente-Canyon.com für Canyon Noaschetta (inférieur) Partie inférieure faite à 4 en 3h20.Croisé un local, nous a signifié une énorme crue il y a 1 mois.Résultats : la passerelle a disparu!! 1 relais mal en point sur une cascade. Et le relais de la C18 (juste avant la C55 de la fin) a complètement disparu! Nous avons dû laisser la corde de la cascade precedente (C25) en rappelant du relais de la C55 finale.Pour les prochains penser au perfo! (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/22940/observations.html)

Automatisch importiert von Descente-Canyon.com für Canyon Noaschetta (inférieur) La crue de cet été à tout endommagé Les relais sont abîmés et tiennent de manière aléatoireLes cordes se coincent On a descendu souvent sur monopoint Le relais de la C60 avait disparu Obligés de remettre deux points au tamponoire dans le granit, 1h de perdue Je déconseille vivement la descente de l'amont et aval, à moins de venir avec perfo pour réequiper serieusement (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/22940/observations.html)

Granite, which we were later told is not really granite, makes this canyon unique. This smooth rock like this makes it the canyo. More aesthetic than the valley, also quite technical especially a waterfall just before the final 60 in a narrow corridor under flow. Nice canyon! (machine translated)

I write this review to recall a beautiful descent that is no longer feasible today (2025) after a catastrophic flood, it was really a beautiful canyon. Can it be retooled? (machine translated)
