<b>Summary:</b> (machine translated) The Ordiceto or Urdiceto ravine rises from the lake of the same name at an altitude of more than 2000m from the snow accumulated in its glacial cirque. This gives it a permanent and very cold flow that, in case of entering it with high flow, can give us a scare in its fattened area for its dangerous water movements. Well formed descent that, in spite of the high flow, does not allow us to make jumps. A very close and easy access, as well as an almost immediate return to get into this short but unbeatable descent.		
<b>Hydrology:</b> (machine translated) Before the fattened zone. At the 8th rappel (from the grates). And before the last rappel		
<b>Access:</b> (machine translated) We have to go to Parzán, for this we arrive at Ainsa and take the A138 towards France. After passing Bielsa we arrive at Parzán and shortly after passing the pk 84 we see the sign "Urdiceto lake". We take this forest track that crosses the river Barrosa. We parked on the esplanade on the other side of the river, there is currently a company of guides (Impande Guías).		
<b>Approach:</b> (machine translated) We continue along the forest track ascending towards Urdiceto lake. Two sharp bends will raise us above the valley and then another to the left takes us into the valley of Urdiceto. In the sharp bend to the left we see a meadow with beehives and a path. We pass the beehives and soon we enter the ravine.		
<b>Tour:</b> (machine translated) Gully to evaluate very well the flow because in the fattened zone it has a lot of movement. Very slippery and cold		
<b>Return:</b> (machine translated) After the last rappel we exit to the right to the meadow. We cross it and reach the car.		
<b>Coordinates:</b> Canyon Start <a href="#">42.6676 0.2212</a> Canyon End <a href="#">42.6686 0.2175</a> Unknown Parking <a href="#">42.6732 0.2152</a>

A short canyon that can be easily combined with Barrosa and Trigoniero. Short, pretty and never boring, but cold water. (machine translated)

## BARRANCO DE ORDÍKETO

Garganta del tramo final

GRANITO MUY PUÑO  
Apreciable disminución de caudal por captación de aguas contiguas a R8.

Aguafría

Diseño completamente escondido bajo el bosque.

- R1 - 2 anclajes loba.  
Gravado huecos en Dobre garganta.  
No cubre nada. Rapel fuera de caudal.
- R2 - 1 anclaje loba.  
Desaparece dcha, espuesto (imposible con cierto caudal).
- R3 - 2 anclajes loba.  
Rapel junto al caudal.  
No cubre nada.
- R4 - 1 anclaje loba.  
Rapel por guberte, por medio del caudal.  
Atención tranco, primero por debajo y luego por la loba. (muy problemático con cierto caudal).  
Casi cubre. (reborde de abogara bajo el agua, antiguo).  
Instalación alternativa por la loba (caudal alto); pasamanos colgado sin equipar. Fuera de caudal.
- R5 - 1 anclaje loba.  
Rapel por caudal.  
Cubre.  
1 anclaje alternativo más a la loba. (caudal alto) fuera de caudal.
- R6 - Arbuños dcha.  
Rapel por loba, fuera de caudal.  
No llega a cubrir.
- R7 - Arbuños loba en región sombreada (pasamanos de acceso, equipado, desde anclaje loba).  
Fuera de caudal.
- R8 - Rapel desde la raja del canal-troncal (instalación original en arbuños más abajo dcha), dcha.  
No cubre.  
Rapel por caudal a partir del lumbal.
- R9 - Dos anclajes loba.  
Fuera de caudal.  
Cubre.
