Country: España / Spain **Region:** Aragón **Subregion:** Teruel **Town:**		
Difficulty: a little difficult	**Grading:** v4 a2 II	**Total time:**
Approachtime:	**Tourtime:** 1h	**Returntime:**
Altitude entry: m	**Altitude exit:** m	**Delta Altitude:**
Canyon length: 340m	**Highest rapell:** 37m	**Amount rapells:** 5
Transport:	**Rock type:**	**Drainage area:** km²
Season: March - November	**Orientation:**	**Best Time:**
Rating: ☆ 0 ()	**Info:** ★ 0 ()	**Belay:** ★ 0 ()

Specialities:

Gear:

Summary: (machine translated)
Waterfall generally dry except after rains, perfect for beginners. In winter some beautiful ice waterfalls are formed.
To complete

Hydrology: (machine translated)
Yes, except in the final part.

Access: (machine translated)
We are located in Alcalá de la Selva, at the foot of the Gúdar-Javalambre mountain range.
We will leave the A228 towards Mora de Rubielos, after passing Solano de la Vega we have a track on the right just at the beginning of the curve. Depending on the vehicle we have we can park here or continue.
There are two tracks, one to the west and another parallel to the road that soon turns right. We will follow this track over the cut 4 kms until right next to a farmhouse, where is the bed of our dry creek.

Approach: (machine translated)
From the second parking lot it is obvious and immediate

Tour:

Return: (machine translated)
When arriving at the lower track we will take to the right to a wooded channel that will take us above the walls to the track, or we will follow the track parallel to the river Alcalá (Tormeda's way) until linking with Valdecerezo's way, this one is longer until, at least an hour and a half, but much more beautiful than to return by the approach.
