Gear:

Summary:

Hydrology: (machine translated)
At several points, it is difficult to escape from the right bank.

Access: (machine translated)
For the SO615 of Soria
OpenStreetMap cartography (OSM)
The access to the parking lot, from Yanguas in the direction of Enciso, is a little more than 3km away and before the track that winds up the road to the uninhabited village of La Vega; we will see a parking lot for a couple of cars at the exit of the torrent of San Cabras.

Approach: (machine translated)
OpenStreetMap Cartography (OSM)
Follow the road towards Enciso; after about 300m, turn left onto a path marked with blue circles; further up, the path forks; continue on the left; after a few meters we see on the left the bed of the ravine, its embedded area and the previous one, occupied by a thick forest. In this place, we leave the path and descend by an area of the escarpment - stone milestones - that is easily climbed and that leaves us near the riverbed; a short distance from the first r5.

Tour: (machine translated)
Short but interesting descent with water. A 5m dexterity leads us to an R7; then we chain several badinas in an R24; we chain another R7 and ends in another R18m that leaves us in a wide badina next to the exit road to reach the car.

Return: (machine translated)
OpenStreetMap Mapping (OSM)
We take the road to the exit, straight to the parking lot.
