Summary: (machine translated)
Generally dry descent, with a losing access and a magnificent waterfall (dry) of 15 + 45m. Perfect to combine with Gabarri.
Peculiar descent in the north of Zaragoza, close to Huesca and Navarra, and with the Pyrenees in the background.

Hydrology:
No

Access: (machine translated)
We will have to be located near Lorbés.
On the A21/N240 between Pamplona and Jaca, we will take the A137 towards Sigüés and Salvatierra. We will leave the first one behind and when we arrive to Salvatierra, in the curve that makes the road, to the left, inside the town, we will find the detour to Lorbés to the right (12km).
Along this road we will go for 7kms until almost crossing the river Gabarri, here we will find a track on the left that in north direction goes, by the orographic right of our river, until almost the headwaters. It is about 4kms of track until before the left fork.

Approach: (machine translated)
Access bcos Gabarri
We will leave following the river, south direction, towards an old borda, we go around it and take a small path that starts behind it.
Access to the Paco Chacobo, Paco Leala and Gabarri banks.
This small path, loser in many moments, raises us over the valley, to go heading north towards the riverbed of our descent, after a turn to the right we change from the mountain and we will see the long waterfall to descend. Now we will only have to follow the ascent gently with the waterfall on the left, surrounding this small cirque and surpassing it until we reach the riverbed a few meters above.

Tour: (machine translated)
Spectacular waterfall (when it carries water), which will require us to use good rope management in its vertical.

Return: (machine translated)
We will follow the riverbed until we reach Gabarri and from here to the south following the path to the track.
