<b>Reports:</b>		
2026-03-01   Jeroen Kirchner   ★★   📖 ★★   🪚 ★   🌊 Normal   🍏 Completed Recent tour that could do with a comprehensive review of the anchors and rock quality. In two locations at least i noticed cracks and hollow, fractured rock, so i reached out with a solution: one time from a tree (the rope used, was found at the entrance of the canyon, probably cut) with a ring, on the right bank. Another location a few meters back from a steel anchor, also right bank, for a stainless steel Tebylon anchor. The higher abseils have double inox anchor with chain, and on better rock. Ideally combined with for example Val di Gole, when in the area. Best to bring ropes to leave behind, a drill and a couple anchors with your critical (sun)glasses on.		
2026-03-01   MirkoT   ★★   📖 ★★   🪚 ★   🌊 Normal   🍏 Completed Carefully evaluate where some belays are placed since in two cases we preferred to integrate at a distance from where there are older ones (installed 2-3 years ago) due to obviously fractured rock. The last diveable and repeatable pit from multiple positions is a gem. (machine translated)
