Specialities:

Gear:

Summary: (machine translated)
Low but narrow gorge with deep pools. Many jumps and slides

Hydrology:

Access: (machine translated)
Follow road 209 to the houses of Nomenj. In the area of Nomenj, turn left onto a dirt road that immediately passes through a culvert under the railroad. After the culvert, follow the dirt road to the right until you reach a parking lot in front of a bridge built in 2011. Popular bathing place.

Approach: (machine translated)
Lower part: Cross the Sava and follow it upstream until you reach the waterfall at the gorge exit.
50m to the west and east of the exit of the gorge, there are steep paths leading to a small bridge above the last gorge. Continue to follow the clear climbing tracks uphill until you can descend to the stream below a rockfall.

Upper part: Cross the Sava and follow the path upstream to the exit of the sand road. From here, follow the climbing tracks southwards (dry stream valley) until you reach a forest road. Follow this until you can descend through the forest to the stream after a wood storage area.
If you have two cars available, you can get to the upper entry from the upper parking lot as follows. Turn left at the first forest road junction, then right onto an overgrown forest road, which you follow until you reach the stream in the area of the karst spring.

Tour: (machine translated)
You reach the stream in the area of a strong karst spring. A short, low gorge is followed by a long, slippery walking passages before the stream flows into a low gorge. Jumps of up to 12m and rappels of up to 15m alternate. Very beautifully washed out rock with rock gates and arches. Watch out for siphons and deep potholes hidden in the white water. Unfortunately, this part has been heavily overgrown by various storms in recent years.
After a large rockfall from the right side of the valley, the stream can be exited to the left (access path for the lower part)
The abseiling points in the lower part are somewhat more exposed and are mostly reached via cross passages.
The gorge exits with a beautiful 9m jump into a large pool. Commercially accessible
In dry summers, the Grmecica can dry out completely.

Are east of the canyon according to the description up the path. But a lot has changed in recent years. There is a new cycle path down by the Sava. The path up the mountain is extremely overgrown. We went up the slope without a path, between bushes and thorns, which wasn't much fun. Then over the Mala Recevnica hilltop and an old overgrown tractor path southwest into the canyon. Maybe 300m below the spring. The upper part of the canyon is very slippery and partly very blocked with wood. A chain is very questionable, the chain links are very worn in by the movement of the flood. But still a great area. The lower part, which is also used commercially, is superiore. Deep pools, well built, only one place with a lot of wood. The final waterfall was also a great jump. (machine translated)
