Specialities:

Gear:

Summary: (machine translated)
Very aquatic canyon with a final rappel that must be evaluated very well because the rebound it forms is very dangerous. In spring only for people with a lot of experience.

Hydrology: (machine translated)
The following

Access: (machine translated)
On the N260 between Pont de Suert and La Pobla de Segur, at the height of Senterada we turn off on the L503 to Torre de Cabdella. We will continue along the same road to the village of Cabdella where we will park.

Approach: (machine translated)
We will leave by the path towards Port de Rus and Taüll, when we have been almost half an hour, at a turn to the right of the path, we will see a milestone on the left, from here we will go down to the riverbed.

Tour: (machine translated)
We will have a good climb up to the dam and another area of climbing. All this can be avoided by entering a little further down just before the most fattened area.
From here we will find a chaos of blocks and the first two rappels. Caution with the overhangs and the force of the water. The gully opens up a bit and closes for R25 and a couple of more rappels. When we get to this area the canyon opens up and we will have small slides that we can avoid by a path to the right to the bridge.
Once on the bridge we have the fantastic final R15 (very dangerous with high flow), which if we do not see it clear we cross the bridge and go down the path to the left. If we do the R15, be careful with the water flow of the pool.
Then we will have another area of dexterity

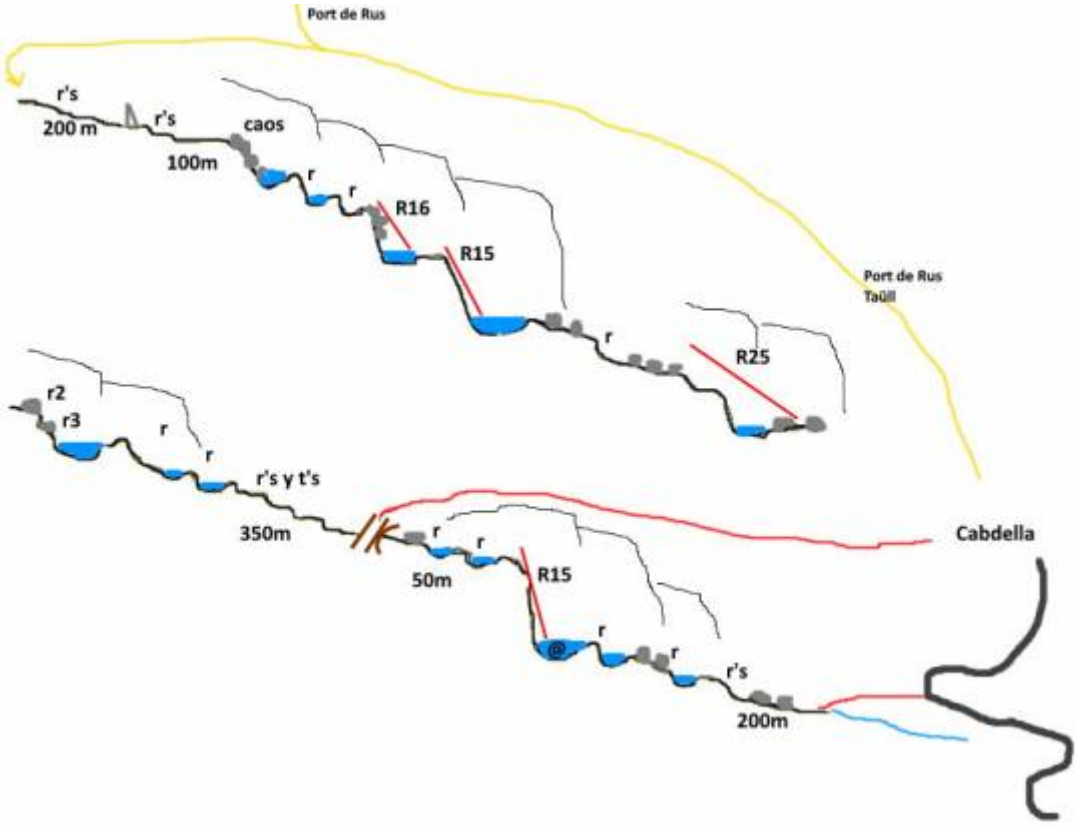

Return: (machine translated)
From the bridge to the left in 10min to Cabdella.
After the R15 and some steep slopes we take a path to the road.
