Summary: (machine translated)
Very attractive canyon with slides and possible jumps. With little water technically not particularly difficult, but high risk with too much water (in the whirlpools already several dead!).

Hydrology:

Access: (machine translated)
From Ripoll, head north on the N-260 to Ribes de Freser (13.8 km). Approximately in the center of the village, on the bridge over the Rigard turn right into the Carrer Major and then on the GIV-5217 up to Queralbs (7 km from Ribes). Here we park our car in the large parking lot southeast of the railroad line. \n\nThen we take the rack railroad up to the Santuari de Nuria. \n\nAlternative access from below:
http://www.wikiloc.com/wikiloc/view.do?id=13980525\n\n

Approach: (machine translated)
From the Santuari we take the footpath down towards Queralbs. The path descends along the orographic right side of the slope of Nuria. Then it crosses the river and the railroad line. A little later we see the diversion structure where we enter.\n\nAlternatively, of course, you can walk up to the entry from below.

Tour: (machine translated)
The concrete sill for water drainage at the beginning should be only partially coated by the overflowing water, as water is added in the canyon itself.3 parts linked by footpath; the last part is modest. Attractive slide and possible jumps.

Return: (machine translated)
Keeping to the right at the exit, we take a footpath that leads us back to the parking lot in Queralbs.

Coordinates:
Canyon Start 42.3760 2.1608
Canyon End 42.3666 2.1692

Automatisch importiert von Descente-Canyon.com für Canyon Nuria Malgré les gros orages de la veille Nuria passait. Eau laiteuse donc on a pas tout sauté mais tous les tobs (même le tob de la mort) passent parfaitement (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/2578/observations.html)

Automatisch importiert von Descente-Canyon.com für Canyon Nuria Débit correct, tous les tobs passent sans problème y compris le T17 éject qui est un must ! Le saut du pont de Sastre passe aussi.Préférer la sortie Rd juste après le T17, qui nous ramène (sèchement !) sur le GR (Quelle: https://www.descente-canyon.com/canyoning/canyon-debit/2578/observations.html)

Upper dam half covered, intermediate diameter pipe releasing flow in the gutter (see photo info in descentecanyon). Pools without dangerous movements. Slides and jumps ok. Death slide made by the active (still prohibited by nesting, but can be avoided by lower chain). Dead goat at the end of the gully. Many groups early in the morning. (machine translated)

Automatisch importiert von Descente-Canyon.com für Canyon Nuria Alt. Départ 1650m et non 1600.Débit correct, facile avec ce niveau d'eau. Pas de difficulté. Tout passe. Le tronc d'arbre coincé dans la deuxième partie a été coupé donc saut possible.Belle descente en 2h30.Pas d'intérêt de descendre dans la rivière entre Pont del Salt de Sastre et Pont de Cremal, mieux vaut prendre le sentier RG.La fin est également moins intéressante mais
