Summary: (machine translated)
Descent of the Trevijano, a tributary of the Leza river.

Hydrology: (machine translated)
The descent is completely open and can be abandoned anywhere; however, there is a clear exit going up to the road that passes over the bridge; another exit is further down, where the ravine crosses the road that goes to the Torrejón viewpoint.

Access: (machine translated)
OpenStreetMap cartography (OSM)
From Logroño, follow the LR-250 to the entrance of the town of Soto en Cameros, park at the entrance, on the right, next to an urban waste collection area.

Approach: (machine translated)
OpenStreetMap mapping (OSM)
At the entrance to Soto en Cameros, arriving from Logroño, before reaching the hostel, take a path to the right - signposted to date - that goes up to the village of Trevijano. After approximately 20 minutes, we cross the bed of the Trevijano stream, this is the division between the upper and lower part of the ravine. The upper part is very muddy and lacks of interest, reason why we will initiate the descent in this part of the ravine.

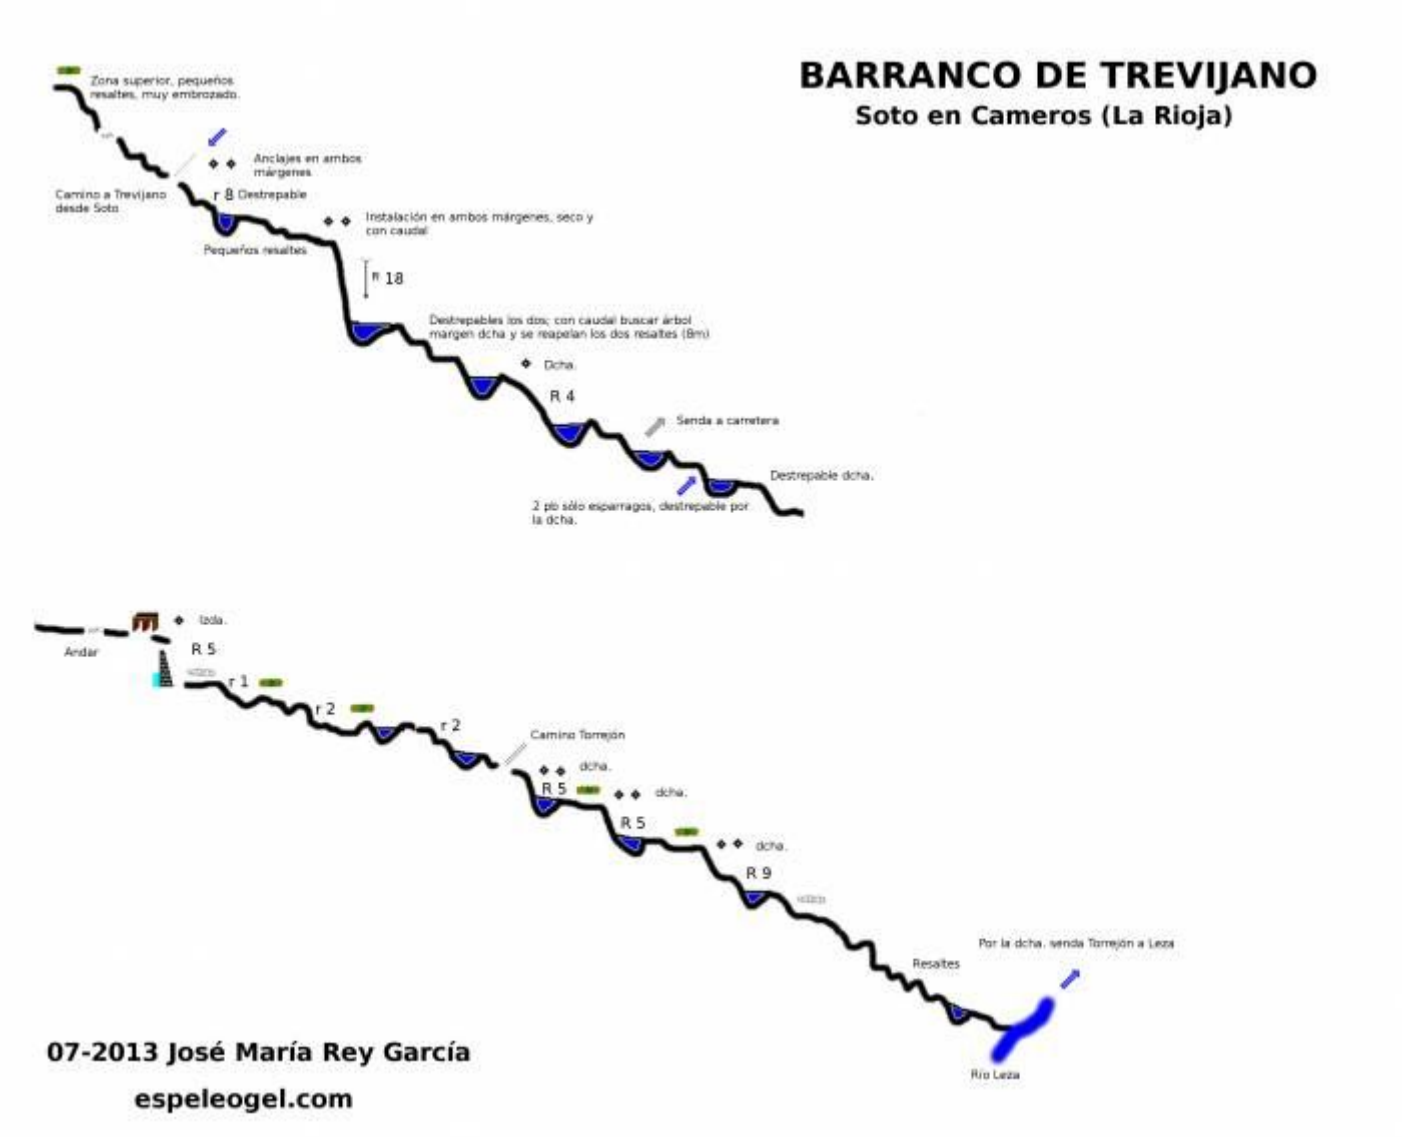

Tour: (machine translated)
We start with a first rappel ramp of about 8m with anchors on both sides, and that in dry conditions can be climbed. After a few small ledges we reach the most outstanding difficulty of the descent, a very aesthetic R18 with anchors on both sides. The next two ledges can be climbed depending on the flow, otherwise it will be necessary to look for a tree on the right bank to rappel safely. Another R4 and several climbable projections take us to the lower part of the bridge that crosses the road; we descend a short R5 between rocks. Several ledges lead us to the Torrejón path; on the other side we descend two R5s and a flat R9 separated by stretches with abundant undergrowth. Then another succession of climbable ledges leave us at the Leza river.

Return: (machine translated)
OpenStreetMap Cartography (OSM)
We go up the leza a few meters until we find the Torrejón path on the right, which we will follow to Soto en Cameros.
