

Kirchlbach

Crear: 2023-04-19 10:10:30	Actualizar: 2024-10-20 15:55:19	Imprimir: 2026-05-30 09:05:24
País: Österreich / Austria Región: Tirol Subregión: Bezirk Innsbruck-Land Ciudad: Scharnitz		
Dificultad: no tan difícil	Grado: v3 a2 IV	Tiempo total: 4h5
Tiempo acceso: 1h	Tiempo tour: 3h	Tiempo regreso: 5min
Altitud de entrada: 1460m	Altitud de salida: 1165m	Altitude delta: 295m
Longitud del cañón: 800m	Rapel más alto: 26m	Cantidad rapells: 16
Transporte: A pie	Tipo de roca:	Zona de entrada: km ²
Temporada:	Orientación: Este	Mejor época:
Clasificación: ★ 4 (3)	Información: ★ 1.5 (2)	Belay: ★ 2 (3)
Advertencias: <i>Campos de nieve</i> Normalmente habrá grandes y persistentes restos de nieve en el cañón (orilla izquierda de escape, no verificado). Las técnicas alpinas son imprescindibles y se debe tener mucha precaución al evaluar los anclajes impactados/ausentes y el estado de la roca. En ciertos años también puede haber una segunda avalancha a la salida del cañón = se puede comprobar a pie antes de subir. A menudo, al pasar por Kirchlbach, se puede notar incluso un frío creciente.		
Especialidades:		
Equipo: Cuerdas: 2x30m		
Resumen: (traducción alternativa) Alpine tour in an increasingly narrow and deep gorge. It includes traversing on large snowremains, possible damaged anchors and should only be tackled by experienced teams with the appropriate gear.		
Hidrología: (traducción alternativa) Snowremains, rainfall and karstic sources at start of the canyon.		
Acceso: (traducción alternativa) From Scharnitz, cycle into the Karwendel valley towards the Karwendelhaus. After the Isar bridge, turn left and cycle steeply up into the Karwendel valley. 6.1 km after this turn-off we cross the Kirchlbach. We park our bikes here.		
Acceso: (traducción alternativa) About 400m further along the road, we turn left onto a dirt track. We leave this later and follow the path that leads us uphill until there is an access into the open streambed here.		

Recorrido: (traducción alternativa)

Updated tour Oct. 2024

2 bolts L 20m

1 bolt R 10m

2 bolts R 20m (original anchor on bad rock!)

1 bolt L 10m

1 bolt R 20m

2 bolts L 25m

1 bolt L 6m

1 bolt L 8m

Snowfield to traverse for 100-200m: emergency bolt L 20m (if snow still reaches the bend in the canyon), if the exit of the snow is in sight before the bend in the canyon (a wall that stops the snow) descend with alpine techniques and find 1 bolt L 15m

Narrow part, high chances of rockfall, 2 different bolts R 8-10m

Stuck boulder, 1 bolt R 10m (damaged quicklink backed up with carabiner)

2 bolts R 16m

1 bolt R 18m

Grand finale 1 bolt L 24m (the other anchors are, at present, unreachable)

Possible second snowremains (building a higher wall than the first) possible emergency exit L

1 bolt L 10m

Downclimb and exit

Regreso: (traducción alternativa)

After we are out of the gorge, about 100m in the wide gravel bed to the road bridge.

Coordenadas:

Also this year, very late (October), large snowremains halfway and (this is new) also at the exit of the canyon, both impossible to go below. Alpine techniques are a must! Anchors: some of the single anchors deemed 'ok' by previous teams, are actually on hollow, fractured rock!! These are now doubled but should be evaluated carefully, possibly equalized or even relocated. I have taken out much of the non-stainless steel anchors and replaced with inox. Doubled or renewed others. At the end of the large snowfield halfway the canyon, there is an emergency anchor (high!) and a damaged anchor (low), both on the left. The snow seems to end at this location every year (i.e. just before the narrow part, where the canyon makes a bend and stops the snow), this emergency anchor may be useful for reentering the canyon. From this point onwards, high chances of rockfall, until the impressive grand finale with unreachable anchors (i added in 2023 a single M10 on the left, with exposed access but well-protected). I post the sequence here, for copying it to the file on Opencanyon: 2 bolts L 20m 1 bolt R 10m 2 bolts R 20m (original anchor on bad rock!) 1 bolt L 10m 1 bolt R 20m 2 bolts L 25m 1 bolt L 6m 1 bolt L 8m Emergency exit L Snowfield to traverse for 100-200m: emergency bolt L 20m (if snow still reaches the bend in the canyon), if the end of the snow is in sight before the bend in the canyon (a wall that stops the snow) descend with alpine techniques and find 1 bolt L 15m Narrow part, high chances of rockfall, 2 different bolts R 8-10m Stuck boulder, 1 bolt R 10m (damaged quicklink backed up with carabiner) 2 bolts R 16m 1 bolt R 18m Grand finale 1 bolt L 24m (the other anchors are, at present, unreachable) Possible second snowremains (building a higher wall than the first) possible emergency exit L 1 bolt L 10m Downclimb and exit

Only the first anchor has two points; all the rest are single points. The anchors are mixed with M8 aluminum (or non-stainless steel?) and M10 stainless steel. The oldest anchors are M8 Aluminum Petzl Hanger (look like this <https://vintageclimbing.com/products/hanger>). - We replaced two rusty maillons with 8mm galvanized steel one. - We took down one worn-out orange rope, because there is another well-bolted anchor nearby. - We rappelled with the existing bolts and didn't feel unsafe, but use them at your own risk. - We met some snow in the middle of the riverbed, but walking beneath/around it was easy and fun. Be sure to come to this canyon after the snow has mostly melted, because the snow can literally block the passage. - Approach trails are not obvious in the middle, but it is not hard to find the correct direction. - Rocks are mostly not slippery.
