Automatisch importiert von Descente-Canyon.com für Canyon Fulbach We did part 3. Approach using the route 'Fullbach tramo 3' posted on wikiloc (except we started on the boulder field) in 2h. Route is good to follow, but certainly very exposed most of the time. Luckily no snow anymore. Water level increased quite a lot during the day due to snow/glacier melt (sunny and quite warm), but nothing too serious. Especially the last part is very narrow and will get very difficult with more water. All anchors ok. Hanger of the last C30 is a bit loose, bolt is solid. We found that longer rappels are often a few meters longer than the values on the topo! (Quelle: <https://www.descente-canyon.com/canyoning/canyon-debit/22861/observations.html>)

Automatisch importiert von Schlucht.ch für Canyon Fulbach / Gasteretal, Wasserstand: "Wenig und plötzlich um 15h DC" Verankerungen: "OK, 2 Bohrhaken neu gelegt" 4 Teilnehmer, 6.30 Std für die ganze Schlucht. Zustieg: besser bis 1693 steigen (1732 auf aktuelle LK). Dann 150m nach links horizontal queren (einige Eisenstangen). Fast durchgehend Wegspuren, ausser durch Im Halpi Hang (Quelle: <https://schlucht.ch/schluchten-der-schweiz-liste/1154-fulbach-gasteretal>)

The access description in "Swiss Alp Canyon tome 1" is correct, but it is not possible to turn left at altitude 1600m. Follow the trail east to point 1732, then return west for +/-150m horizontally. Several metal rods in the middle of the traverse. Traces of yellow or orange paint are visible all along the access, but are sometimes widely spaced. There are paths all along the access except on the grassy slopes of Im Halpi and on the descent from the scree slope. Access 3h45 with a short search at 1732m. Complete descent in 6h30 with 4 people. Small trickle of water in the first sections, then sudden increase in flow at 3pm to reach a "correct flow" (karst-related?). Very hot at first (full sun), then cold at the bottom of the canyon. The sun doesn't reach the valley floor this season. (traducción alternativa)
