Anchor monopoint, but very good. Some searching in places. Overall sparsely drilled, but works at "normal" water level (which is already ample). Some downclimbs are tricky. 1x AN and 1x rappel on the old weir crown on the metal. Grip mostly very good, except for the crux at the beginning. Be sure to stay on the rope to set up the next ropes. Panic exes and good height are an advantage ;-). There is a lot of wood in the lower third, which is also helpful for downclimbing. The canyon and rock formations are very impressive. Steep access, but a picture book! (traducción alternativa)

Top conditions. Water level unproblematic. Stands sometimes difficult to reach. Certainly not to be underestimated with more water. Anchors set below the bridge at the penultimate spot. Great short tour for lovers of big flows (traducción alternativa)

Currently very good conditions. Very good grip, all anchors available. (traducción alternativa)

Normal water edge for this canyon. No floating anchor necessary at the moment. All pools are safe. (traducción alternativa)

A dead sheep at the start of the canyon still in one piece. Very nice casing and series of abseils in the fault. We added a pad to the sequence. Water movements that didn't pose any major difficulties. Despite the big debit, there were few waterfalls in the asset. We parked in a free parking lot on the other side of the river, next to the bus stop, in the sun all day long. Phone lost in the canyon. (traducción alternativa)

Nice canyon with high flow, at the 12m level in the caisson a plate was missing, otherwise it went through without a hitch despite the high flow, a phone was lost on the 100m walk. (traducción alternativa)

Water very cold but ok, 1 hook goes off at the 10m slide. But it can be solved with a wild jump. Great tour with lots of water flow. (traducción alternativa)

GeileTour, high water flow, 1 drill tab goes off at the 10m slide, slide is dangerous rock nose, better jump, without drill tab was solvable by a wild jump. (traducción alternativa)
