Pays: Schweiz / Switzerland Région: Kanton Tessin / Cantone Ticino Sous-région: Bezirk Riviera Ville: Lodrino		
Difficulté: difficile	Niveau: v4 a5 IV	Temps total: 3h15
Temps approche: 30min	Temps tour: 2h30	Temps de retour: 15min
Altitude d'entrée: 650m	Altitude de sortie: 490m	Altitude du delta: 160m
Longueur du canyon: 950m	Rapelle le plus haut: 47m	Nombre de rapelles: 9
Transport: à pied	Type de roche: granite	Zone de prise d'eau: 17.00km ²
Saison: juillet - septembre	Orientation: Est	Meilleur moment: 10-14 Heures
Évaluation: ★ 4.8 (24)	Info: ★ 2.6 (18)	Belay: ★ 2.6 (23)
Avertissements: inactif: Éviter les perturbations grâce au canyoning de masse (11.08.25 - 31.08.25) Après le RIC 2025, de grands groupes ont été signalés comme ayant jeté des débris sur les sites de stationnement, occupé des propriétés privées, fait la fête bruyamment après le canyoning et s'étant garés sans tenir compte de l'accès des habitants de la région. Les communautés locales sont déjà en colère ! Afin d'éviter des conséquences négatives et des réglementations, assurez-vous que vous agissez en tenant compte de l'environnement et des communautés locales. Veuillez utiliser chaque voiture complètement pour éviter les embouteillages sur les parkings, utilisez des parkings alternatifs, soyez silencieux, limitez l'utilisation du sifflet dans le canyon au minimum, respectez la culture catholique locale en ne vous déshabillant pas visiblement et utilisez des vêtements pour l'ascension. Ne faites pas la fête après le canyoning sur les places de parking et enlevez vos déchets s'il vous plaît !		
Spécialités:		
Matériel: Cordes: 2x 50m		
Résumé: (traduction alternative) Rappel canyon in beautiful granite rock with optional jumps. Very beautiful, deep canyon with turbulent pools and crystal-clear water.		
Hydrologie: (traduction alternative) Can only be walked on without risk after a long dry spell Indicative measuring point, no direct measured value: Little: <150l/sec; Medium: 150-400l/sec; Much: 400-1000l/sec>; Too much: 1000l/sec https://www.hydrodaten.admin.ch/it/seen-und-fluesse/stationen-und-daten/2612 ATTENTION: this measuring point is located in the Verzasca valley, on the other side of the mountain! Checking this value alone is in NO WAY sufficient to reliably estimate the flow rate in the Lodrino.		
Accès: (traduction alternative) From the highway junction (Gotthard/Bernardino) in the north of Bellinzona, head north on the N 2. Shortly after passing through Cresciano, turn left and drive to the other side of the valley to Lodrino (approx. 12 km from the highway junction). Drive into the village (right) and after the bridge over the stream take the 3rd road on the left. Park your first car in front of the cemetery (the parking spaces in front of the supermarket and under the trees in the center of the village should not be used). Take the second car north towards Iragna and after almost 2 km (from Lodrino) turn left immediately after the houses of Rodaglio at a business (GPS coordinates: 46°19'02.46 "N / 8°58'19.70 "E) onto a small road that takes you up to the houses of Legri (a turn-off to the right). - Ignore the access road to the upper Iragna) Continue straight ahead on the small road until it exits onto an open area (helipad) (or continues as a dirt road in a westerly direction). Do not park on the large gravel surface here, as this is a commercial helicopter take-off and landing site! There are no stopping signs for a reason!		

Approche: (traduction alternative)

At the large open area (580Hm) a hiking path starts immediately to the right upwards --> follow this past the house and then without much difference in altitude along the canyon --> the path is exposed in some places and leads to the iron bridge that leads over the Lodrino --> cross the bridge and follow the hiking path to the third bend --> from here a very exposed path goes right next to the canyon to the stream (entry 650Hm). (approx. 30 minutes)

Tour: (traduction alternative)

! very dangerous if there is a lot of water!

After the spectacular access you continue in the stream --> the first cascade is bypassed on the left (left tree for rappelling) --> the next point can usually be jumped after checking the depth and strength of the current (attention, you have to jump far forward, the place is already known to the Swiss air rescue (REGA) as a frequently frequented accident site!) --> immediately afterwards follows the highest rappel with 47m (here you can rappel spectacularly free-hanging on the left at the water or on the right, but with strong rope friction.) --> from here the canyon runs deep --> further on you have several walking and small climbing passages --> jumps should always be controlled as the canyon changes a lot --> in the middle of the canyon there are short abseiling sections in the water course, which can be problematic at higher water levels --> the deep pools also often have a strong current and should not be underestimated --> at the end of the parts that have been rappelled there is a swimming passage --> from here you still have a walking passage and small climbs until the last rappel --> after the rappel you walk for a while through the now rather open streambed until you reach a bridge that runs only a few meters above the streambed (this is NOT the bridge known from the approach). The exit of the Lodrino intermedio is on the left bank of the bridge.

Retour: (traduction alternative)

To the left of the bridge, you can climb over a large boulder onto the bridge. The path leads through the conspicuous intersection to the top left back to the car. (approx. 15 minutes)

Good trip! Beautiful canyon. Water levels are okey. We took all the aquatic lines. Sometimes it looks impressive. But with some knowledge of the canyon and a good team good to go 📖 We did it with a training course. Only the intermedio
