Résumé: (traduction alternative) Watery rappel canyon that exits directly onto the Atlantic Ocean		
Hydrologie:		
Accès: (traduction alternative) From Sao Vicente, take the VE2 in the direction of Seical / Porto Moniz. After the Joao Delgado tunnel, park at the Veu de Noiva viewpoint.		
Approche: (traduction alternative) From the viewpoint, follow the old coastal road back towards Sao Vicente. Shortly before the old tunnel, which is now buried, a steep path goes up on the right-hand side. At the beginning, this is easily recognizable and obvious from the old steps. After a short time, the quality of the old path deteriorates noticeably. The condition becomes worse and worse and more dangerous. If you have a queasy feeling, it is better to turn back immediately. The path is very overgrown in places. Progress is therefore very difficult and slow. After about 200 meters in altitude, the worst is over and the path is in better condition again.		
Tour: (traduction alternative) Beautiful canyon. Anchor points all in good condition, some with high-quality titanium glued anchors. Approx. 20 to 30 meters below the anchor point of the C90, orographic to the right, there is a rock window of the tunnel of the old coastal road ER 101. The canyon can be exited here at high tide or if the waves are too strong. However, there is NO longer a safe way back via the ER101 due to numerous landslides. Large parts of the old road no longer exist! The intermediate stand in the final waterfall is exposed and, depending on the wind, is more or less exposed to the spray. There is only room for two people here. This should be taken into account when planning the rope.		

Retour: (traduction alternative)

The C90 exits directly below the cliffs on the Atlantic Ocean. The way back along the cliffs is only possible at low tide. It leads orographic right over round stones including small climbing sections. At the trickiest passage, you can climb a rock ledge and rappel from an anchor at the top to escape the waves. The anchor is currently (October 2024) heavily rusted, but will be replaced soon. After a good 30 minutes, the coast becomes flatter and the road can be glimpsed. Shortly afterwards, you can cross under the road in a concrete channel (Corrego da Furna waterfall) and then exit to it. The parking exit is opposite. Without a second car, follow the coastal road through a long tunnel to the parking entry (another 30 min).

Beautiful canyon. Anchor points mostly in good condition, some high-quality titanium glued anchors. Access is extremely precarious. If you have a queasy feeling, you should turn back immediately - it gets worse and worse Due to the waves, we decided to break off at the C90 and use the emergency exit at the rock window of the tunnel of the old shore road. The old shore road no longer exists in large parts. There can be no question of a safe way back here. It is therefore essential to walk in such a way that you can get out at low tide and low waves at the bottom of the Atlantic and return there safely. (traduction alternative)
