Paese: Österreich / Austria Regione: Tirol Sottoregione: Bezirk Landeck Città: Schönwies		
Difficoltà: un po' difficile	Grado: v4 a3 V	Tempo totale: 5h
Tempo avvicinamento: 45min	Tempo giaro: 4h	Tempo ritorno: 15min
Altitudine di entrata: 1130m	Altitudine di uscita: 800m	Altitudine delta: 330m
Lunghezza del canyon: 1000m	Rapel più alto: 25m	Quantità rapelli: 30
Transporto: a piedi	Tipo di roccia: dolomite	Area di ingresso: 10.00km ²
Stagione:	Orientamento: Nord-Ovest	Tempo migliore: 9-16 Ore
Valutazione: ★ 4 (17)	Info: ★ 2.5 (14)	Belay: ★ 2.1 (15)
Avvertenzas: <i>Flusso di fango</i> Il canyon è soggetto a inondazioni e colate di fango. Il letto del fiume può cambiare di nuovo e gli ancoraggi danneggiati o mancanti. Prima di impegnarsi, è necessario effettuare una valutazione sulla base degli eventi meteorologici recenti. Lo stato degli ancoraggi deve essere controllato prima di tirare la corda. Il kit di chiodi è utile, ma il posizionamento degli ancoraggi deve essere sensato.		
Specialità:		
Attrezzatura: Corde: 2x35m		
Sintesi: Technical abseilcanyon renowned for its continuity, dark atmosphere, little to no escape route and devastating floods/mudflows that put the anchors to the test. Before committing one must evaluate current state of the canyon and avoid rain or thunderstorms at all cost.		
Idrologia: Water capture above, and release in the canyon halfway. Devastating floods with mud and other debris such as trees, most likely caused by the rupture of natural dams in/above the canyon.		
Accesso: Exit the Inntalautobahn A12 at Schönwies/Mils east of Landeck. At the western end of Schönwies, turn left off the main road into the village. Kronburg is signposted. Follow the mini-signs to Kronburg (west of the railroad and then into the forest). After 5 minutes the road leads over a bridge, park here.		
Avvicinamento: From the P we head to the bridge to check waterlevels and find a small, very straightforward trail on the orographic R with many viewpoints into the canyon and possible intermediate entrances. Your loss if you choose not to do the upper canyon. We continue steep, neglecting the panoramic hiking trail, until we reach a tunnel (road on our left). After the tunnel we continue 100m to easily descend into the river bed, backtracking these 100m to the start of the canyon.		
Giro: Multiple intermediate entrances exist that are only interesting for commercial tours, described here is the full tour. The entrance abseil originally was from a tree (at the exit of the approach tunnel). Now, an anchor is to be found on a large boulder R. Best not to pull back the rope yet, but check the state of the anchor on the second and highest abseil (+-30m) of the tour (R, two glue-in bolts, damaged since many years). A continuous string of smaller abseils follow, some of which are newer (2022-2024) and well-protected, recommended is to stay in the rope, to access the anchors. The lower canyon is excessively bolted, and often with fixed ropes. Two emergency exits now, one L and another R with fixed rope to ascend and reach the bridge in 5 min.		

Ritorno:

Either exit using the fixed rope R and reach the bridge/parking in 5 min. or continue in the canyon until we reach the Inn valley, return R via a small straightforward trail that cuts through the woods and back to the road.

Fünf Personen in 1h50min - alles top.

2025-09-08 | Wido | ⭐⭐⭐⭐⭐ |📖|⭐⭐⭐|📍|⭐⭐|🌊 Normale | 🍏 Completato

All found well, the tracks of the flood are still very impressive. (traduzione alternativa)

2025-08-22 | Alex Arnold | ⭐⭐⭐⭐⭐ |📖|⭐⭐⭐|📍|⭐⭐|🌊 Normale | 🍏 Completato

Beautiful canyon, good conditions. 1h45 for the whole thing for two (traduzione alternativa)

2025-07-11 | Jeroen Kirchner | ⭐⭐⭐⭐⭐ |📖|⭐⭐⭐|📍|⭐⭐|🌊 Normale | 🍏 Completato

Flood happened. The river bed further flattened out and a couple of natural dams one of which near the water release (picture) is particularly unstable (more rocks may need removing). Most of the anchors are fairly unimpacted though partially covered in mud. Two lines got their redundant anchors & the abalakov was replaced though no longer necessary (it was part of an experiment with releasable systems and it should be possible to downclimb now). Used the exit with fixed rope shortly before the bridge.

2025-06-23 | Florian Heufler | ⭐⭐⭐⭐⭐ |📖|⭐⭐⭐|📍|⭐⭐|🌊 Alto | 🍏 Completato

Inspection as part of the canyoning rescuers' training course for the Tyrol Mountain Rescue Service Water level slightly higher today, but no rise or automatic flushing (traduzione alternativa)

2025-05-04 | Andreas Gobber | ⭐⭐⭐⭐⭐ |📖|⭐⭐⭐|📍|⭐⭐|🌊 Basso | 🍏 Completato

We were in there today when the water level was low and the "automatic rake" wasn't working today. We got in at the 35m rappel (classic "Area47" entry) and did the Kronburg to the exit. All the stands are usable here (but not all are good!) and you can get through without any problems. As usual, you can find a video of the tour on Instagram at <https://www.instagram.com/reel/DJTnOoqgT9o/?igsh=Zjd4OWNidTVmMzZt> (traduzione alternativa)

All ingredients are united for a new devastating flood/natural dam to build. To appreciate, one should do the top start (at the tunnel), notice the moving rocks and trees that have been cut and fallen/thrown into the river bed. If these rocks or trees are not there, it is best not to enter unprepared! Regarding the broken anchor: its location is in the flow, hence impossible to replace in a durable way. Let's try sth new. I've placed an abalakov/Sanduhr with 12mm drill in the most obvious location. When damaged or missing, it should be easier to replace than a broken bolt.

2025-04-06 | Gregor Bernsteiner | ⭐⭐⭐⭐⭐ |📖|⭐⭐⭐|📍|⭐⭐|🌊 Basso | 🍏 Completato

from entry stand 35 - stand 08 (guide Riml/Amor). Few bolts damaged. !!!!Attention 1 bolt broken!!!! But still easy to walk on. The water level rose significantly for an hour!!! (traduzione alternativa)

2025-03-28 | Clarissa Linder | ⭐⭐⭐⭐⭐ |📖|⭐⭐⭐|📍|⭐⭐|🌊 Normale | 🍏 Completato

See previous comments. 1 loose bolt at the exit of a fixed rope! (traduzione alternativa)

2024-10-18 | Jeroen Kirchner | ⭐⭐⭐⭐⭐ |📖|⭐⭐⭐|📍|⭐⭐|🌊 Normale | 🍏 Completato

Water levels are stable, some pools are clean of gravel. Did another effort to remove damaged anchors, in total since i started with this +-40 anchors. Warning: 1 glue-in with ring (right bank, half-way the canyon) is broken, but still may be of use since this passage is practically downclimbable without aid. 3 hours for the full canyon in 3 persons.

2024-10-11 | Manuel Reindl | ⭐⭐⭐⭐⭐ |📖|⭐⭐⭐|📍|⭐⭐⭐|🌊 Basso | 🍏 Completato

Water level very low. Stands ok. Upper and middle part walked on. (traduzione alternativa)

2024-09-06 | Jeroen Kirchner | ⭐⭐⭐⭐⭐ |📖|⭐|📍|⭐|🌊 Normale | 🍏 Completato

Removed many of the fixed ropes before the heavy rains that are forecasted. Noticed a couple of new trees and (not stainless & some unnecessary) steel anchors.

2024-06-14 | Max Rudholzer | ⭐⭐⭐⭐⭐ |📖|⭐⭐⭐|📍|⭐|🌊 Normale | 🍏 Completato

At present, we strongly advise against visiting the Kronburg. There are unresolved problems with the power plant
