All anchors in good condition. Some older rope around trees for the earlier abseils that could be changed but still ok condition. After the big abseil 175m the bolts can be found 10m approx to the left of the natural line of the rope in a little overhang.

The further down you get, the more slippery it becomes. Then very slippery at the bottom. As the bridge over the Waldemme is currently occupied by a construction site, we recommend the alternative exit at the bridge over the Staubbach at 644'071.51, 196'958.08. Anchors were all in order. Rappels can / must be made on trees in places. (traduzione alternativa)

Approach to the entrance to Rest. Fruttegg. The gorge is also passable when there is more water, as you can avoid almost everywhere in the forest. Before the ascent, be sure to check the water level at the exit in the Waldemme. If there is too much water, you can get off two rappels before the exit at the road bridge. (traduzione alternativa)
